Cracow, Poland

Languages:

- polish - native
- english - B2

Hobbies:

- rally
- stock market & finance
- bouldering
- space & science
- Star Wars franchise
- agriculture and horticulture

ABOUT ME

Accomplished engineer with a track record of delivering end-to-end solutions, from concept to mass production. Proven in cross-functional leadership, managing product development, R&D projects, founding and running teams and company from the ground up. Now seeking a senior, lead, or management role where I can drive products and teams with the same ownership.

EDUCATION & ASSOCIATION ACTIVITIES

AGH UST Cracow

Management and Production Engineering (M.Eng) **2021-2022**

- Specializations: Production management
- Thesis: „Influence of selected parameters of vehicle charging stations on the development of e-mobility”

Mechanical Engineering (M.Eng)

2018-2020

- Specializations: Informatics in mechanical engineering
- Thesis: „Analysis of the stability of floating bodies depending on their shape including design support packages”

Mechanical Engineering (Eng)

2015-2018

- Specializations: Informatics in mechanical engineering
- Thesis: „Strength analysis of wishbones connection with suspension in bold of Formula Student using the ANSYS software

AGH Racing Team - Suspension department

2017-2022

At AGH Racing, a student engineering team at AGH UST, I was responsible for several end-to-end mechanical projects in suspension systems. I also worked on design processes to boost team efficiency. I took part in building two combustion-engine cars and Poland's first EV race car.

QUALIFICATIONS

Key Skills

- Business & Team Building: Founded and scaled a company from the ground up, including team structure, hiring, and full P&L ownership; established R&D and production teams and processes at product level
- Product & Process Management: Leading cross-functional teams, prioritizing backlogs, managing full product lifecycles, and defining scalable production and R&D procedures
- Negotiation & Partnerships: Negotiating supplier and wholesale terms, managing stakeholder relationships, and building long-term partnerships across suppliers, subcontractors, and cross-functional teams
- Process Optimization & Digitalization: Process mapping, ERP/PLM implementation, digitalization, and production process automation,
- Technical Expertise: Prototyping, 3D design, DFMA, NPI, and mechanical design across plastics, sheet metal, castings, molds etc. in electro-mechanical assemblies

Other skills:

- Driving license, GD&T, SCRUM, Agile PM, Prince2, SEP 1kV qualification

CAD softwares:

- SolidWorks (8y), Onshape (4y), Sketchup (5y), Fusion 360 (2y), AutoCAD (4y), CATIA (1y), ANSYS Mechanical (2y)

Other softwares:

- Notion, Trello, Slack, MS Office, G suite

PROFESSIONAL EXPERIENCE

Asensus Surgical via GlobalLogic

Senior Mechanical Design Engineer

02.2025 – 06.2026

- Multi-Process Component Design - Designed systems and subsystems spanning injection-molded plastics, sheet metal, castings, and machined parts, applying DFM/DFA principles, material selection best practices, and structural engineering calculations to validate designs
- COTS, Prototyping & Mechatronics - Selected and integrated mechanical and mechatronic off-the-shelf components based on functional requirements, driving full prototype development cycles including build assemblies with cabling
- Test & Validation - Authored test protocols and reports, defined acceptance criteria, designed manufacturing test fixtures, and applied DOE methodologies for product testing and optimization

Cedrowa Stolarnia

Founder and Owner

06.2024 – 02.2026

- Founded and scaled a carpentry business from the ground up, achieving PLN 300,000 in total sales
- Built and led a core team of 3, establishing production processes, scheduling, and quality control workflows from scratch
- Established and managed a fully equipped workshop, developed a reliable supplier network of 5–8 wholesale partners
- Designed and delivered bespoke furniture and joinery solutions for residential clients, managing projects from concept through installation
- Developed a custom automation software tools for creating offer, pricing, automated BOM creation

WILLBERT by EUROLOOP

Senior Mechanical Design Engineer / Product Lead

05.2022 – 02.2025

- Led the design and development of the compartments of innovative 720kW Amber II S-HUB charger: Power Module, Smart Allocation System (S-HUB), Cable routing across whole charger
- Acted as Product Lead, managing the entire product lifecycle from prototyping to mass production
- Implementing ERP and PLM systems, driving process automation and digitalization
- Defined and optimized production and R&D procedures, ensuring smooth scaling
- Oversaw product backlog prioritization and managed product development
- Implementing DFMA, DfR and FMEA methodologies to R&D team
- Designed of sheet metal, 3D prints, milled parts, busbars, welded parts
- Implementing products for mass production

ABB E-mobility via Alten

Mechanical Design Engineer

06.2021 – 05.2022

- Worked cross-functionally to develop new charging technologies.
- Designed and prototyped innovative components for e-mobility chargers, aligning with DFMA and NPI standards.
- Coordinated with internal stakeholders to ensure products were delivered within timeframes and met customer specifications.

TECHRAMPS Groups (FlowParks, WakePro, Techramps, Pumptrack)

Senior Mechanical Design Engineer (started by intern)

04.2018 – 05.2021

- Managed the development of new product lines (FlowParks Larix, FlowPark Home), overseeing everything from ideation to market launch, led cross-functional teams of designers and engineers, coordinating with sales and production teams to deliver customer-focused solutions.
- Delivered multiple large-scale projects, including the ROAM Further parkour park in the USA, by managing internal teams and collaborating with external stakeholders.
- Worked on standardizing mechanical processes and documentation, ensuring smoother workflows for the team.
